

WINDOW OPENING CONTROL DEVICE (WOCD) SASH LIMITER

Window Opening Control Devices (WOCD) are applied to windows for the safety of consumers (specifically children under the age of 5 years). The WOCD (also known as a Sash Limiter) allows the window to open only up to 4" to prevent falling from the window. The WOCD is a fall prevention device and is not meant to be used for security from intrusion. In compliance with the ASTM F2090 (2102 IRC), in a dwelling where the window opening is located more than 72 inches above the finished grade or surface, the lowest part of the clear opening of the window should be a min. of 24" above the floor of the room in which the window is located. Stricter regulations might be in place in specific areas of the country. To verify regulations, please reference your local building code.

FACTORY APPLIED WOCD/SASH LIMITER

Note: Windows that are ordered with the factory-installed WOCDs also ship with WOCD operating instructions.

FACTORY APPLIED KIT available for: Series 8300/8700/8900 DH • Series 130 SH • Series 150/160 SH • Series 450/455/460/465 DH • Series 5700 SH • Series 8050 SH

Window Opening Control Devices (WOCD) can help prevent accidental window falls, limiting the opening of an operable window, yet may be easily disengaged to allow escape in an emergency. WOCDs also self-engage once they are re-closed.

WOCDs can be ordered on many Atrium new construction products and can be fitted on many existing Atrium windows already in the field. WOCDs give homeowners another protection option for added home safety.
